Introduction

Wisconsin counties are essential for our state to prosper. In addition to maintaining both county and state highways, county social and public health services aid the state's most vulnerable citizens. County governments provide these and a vast array of other services in the most efficient and cost-effective manner possible.

Long range, strategic thinking is critical to successfully carrying out the county mission. Data plays an important role in strategic planning. To this end, Forward Analytics, a division of the Wisconsin Counties Association, is pleased to present the 4th edition of *The Green Book, A Book of County Facts*.

Included in this fact book is information on county government structure, county demographics, finances, employment, and new construction.

Counties can use the data contained in *The Green Book* for a variety of purposes including gauging future service needs, economic development planning, and forecasting revenues and expenditures.

In addition to the 48 pages of data for all counties, a data sheet containing all of *The Green Book* data for your county can be found at the back of the book.

The Green Book is also available interactively at www.forward-analytics.net. If you would like additional copies to share, give us a call at 608-663-7188.

I hope you find this tool useful as you continue to make Wisconsin's counties wonderful places to live, work, and prosper.

A handwritten signature in black ink that reads "Mark D. O'Connell". The signature is written in a cursive style.

Mark D. O'Connell, Executive Director
Wisconsin Counties Association

How to Use This Book

The Green Book is organized into four color-coded sections, each with a variety of measures:

- *Wisconsin's Counties* (orange) has information on county administration and board size.
- *Population* (blue) shows population change, the size of various age cohorts, veteran population, educational attainment, and commuting patterns.
- *Finances* (red) includes information on county revenues, spending, and debt.
- *Economy/Development* (purple) highlights jobs and unemployment, income and poverty, property values, and county highway miles.

Most measures have information on two pages. On the first page is a color-coded map that organizes counties into four groups of 18 (quartiles). For those unfamiliar with county locations, a map can be found on page 2. For each measure, the 18 counties with the lowest numbers are shown with the lightest color; the 18 with the highest numbers are darkest. The key below the map shows the ranges for each quartile.

The second page displays a table of detailed information for each county. The statewide average and median (half of counties lower, half higher) are shown below the table.

In the back of the book is a county insert that summarizes your county's information on all of the measures in *The Green Book*. For each measure, it also shows the county's rank among the 72 counties, as well as the state average.

County Government in Brief

Wisconsin has 72 counties whose boundaries were drawn by the legislature and are specified in state law. Generally, county boundary lines run north to south and east to west or follow major physical features.

Counties are governed by a county board of supervisors who are elected for two-year terms. While a “self-organized” county can opt to have supervisor terms concurrent or staggered, none have chosen the latter option. Thus, all supervisors in the state are elected in the spring election of even-numbered years.

Each county determines the size of its board, subject to a statutory maximum that is based on county population. Board size can be changed following the decennial census. Additionally, the number of supervisors can be reduced once between each decennial census by resolution or by citizen petition and referendum.

Counties must have a central administrative officer. A county can create an office of county executive or county administrator, or it can designate an individual holding an existing elective or appointive office (other than county supervisor) to also serve as the administrative coordinator.

County constitutional officers are elected to four-year terms in the fall partisan general election. These include the county clerk, county treasurer, register of deeds, clerk of circuit court, and sheriff.

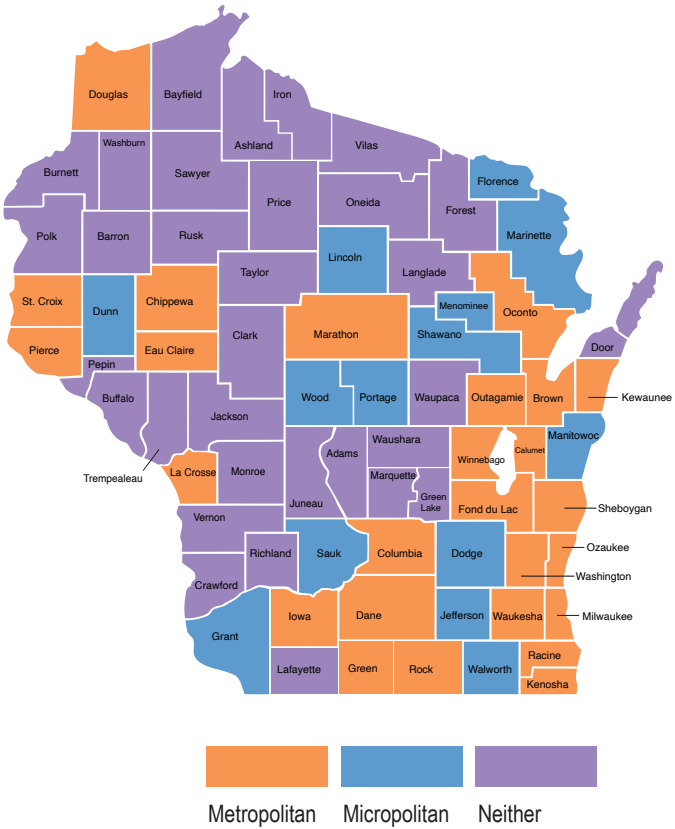

Counties provide a variety of services, many of which are state mandated. They enforce the state’s criminal laws and incarcerate many violators of those laws. They maintain state-mandated vital and property records, and oversee elections. They also administer state human service programs and maintain both county and state roads.

Wisconsin's Counties

County Types

One way to characterize Wisconsin counties is by how urban or rural they are. Urban counties can be thought of as part of a metropolitan statistical area, or MSA, which is a group of counties with close economic ties and relatively high population at its core. Twenty-six counties in Wisconsin are part of an MSA. A micropolitan statistical area is a county or group of counties (sometimes from different states) with close economic ties and centered on a core area of 10,000 to 50,000 people. Fourteen counties fall into this category. The remaining 32 counties are neither metropolitan nor micropolitan. Most economic researchers consider micropolitan and “neither” counties rural.

Wisconsin County Map, 2020
Metropolitan, Micropolitan, Neither

County Board Size

Maximum county board sizes are set by state law and depend on population. Some county boards are smaller due to board policy or approval by voters in a referendum. Board members are elected by district. The average number of residents per district varies widely, from fewer than 1,000 in 14 counties to nearly 53,000 in Milwaukee County.

County Administration

Wisconsin provides counties with three options for the daily management of county government. A county executive is elected every four years in nonpartisan spring elections. The executive appoints certain personnel, submits budgets, and exercises veto powers. A county administrator is appointed by the county board and has many of the same powers as an executive. Administrators do not have veto power. Counties not choosing one of these two options are required to designate an administrative coordinator, either on a full-time or part-time basis.

In 2021, 12 counties had an elected county executive and 31 had a county administrator. The remaining 29 counties designated either a full-time (8) or part-time (21) administrative coordinator.

County population can be viewed from a variety of perspectives. Is it growing or declining? How many school-aged or working-aged people reside in the county? What levels of education do adult residents have? Do residents work in the county or commute to neighboring counties?

Understanding county demography can help policymakers gauge a region's potential for growth and the degree to which current and future service demands are placed on county government.

Seven demographic measures are provided in this section. Although presented separately, some of these measures are related to each other. For example, the working-age share of the population depends not only on the size of that age group, but also on the size of the school-aged and senior populations.

The fastest-growing counties tend to be more urban and have a younger population. Compared to slower-growing counties, a larger portion of their population is of working age. Fast-growing counties tend to have more residents with post-secondary degrees, either at the associate or bachelor's level. This, in turn, can attract employers and ensure better-paying jobs that serve as a magnet to attract workers from other counties.

Counties with aging populations often grow more slowly and are more likely to face worker shortages. As the maps on the following pages reveal, such counties tend to be located in the north, in the central part of the state, or to the southwest.

Population Change

Population change can have both economic and service implications. Changes in the number of residents are due to both internal and external factors. Natural population change (internal) is the difference between the number of births in a county and the number of deaths.

Migration (external) is when residents of other Wisconsin counties, states, or countries move into a county. Net migration is the difference between the number of residents moving out of a county and the number moving in.

A growing population spurs local businesses and demand for public services. A shrinking population can mean less economic activity and a smaller tax base.

Working-Age Population

Counties with larger working-age populations often have higher average incomes. These counties have a greater number of wage earners over which to spread the cost of public services and, likely, fewer residents in need of county services.

In 2019, residents 25 to 64 years of age (prime working ages) accounted for 51.4% of Wisconsin's population, down from 52.7% four years earlier. As the senior population grows rapidly for the foreseeable future, this percentage will continue to fall.

Senior Population

Wisconsin, like the rest of the nation, is experiencing the retirement of the large baby-boom generation. Since 2010, Wisconsin's 65-or-older population has increased by nearly 240,000. As this group leaves the workforce, counties may struggle with worker shortages. Additionally, as this large group ages, the demand for assisted living, nursing homes, and various social services will rise.

Residents 65 or older accounted for 17.5% of the state's population in 2019, up from 13.7% in 2010. In 55 of 72 counties, the senior share of the population was above the state average. In 13 counties, seniors accounted for more than a quarter of the population.

School-Age Population

Since 2010, Wisconsin's school-aged population has declined by more than 50,000. In 2010, the 5-to-19 year old cohort comprised more than 20% of the state population. In 2019, it was down to 18.7%.

It is often said that the children of today are the workers of tomorrow. For counties, the number of young people represents a potential future workforce. Declines in this cohort will likely lead to future workforce challenges.

Veterans

Every Wisconsin county has a veterans service office to assist veterans in navigating the complicated network of state and federal benefits. The size of the veteran population varies widely by county.

Statewide, veterans comprised an estimated 7.9% of the 18-or-older population in 2019. In 26 mostly rural counties, that percentage was above 10%. The state's two largest counties had significant numbers of veterans, but they comprised a relatively small percentage of the population.

Educational Attainment

Higher-paying jobs often require a post-secondary degree, be that an associate, bachelor's, or advanced degree. The percentage of a county's 25-or-older population with at least an associate degree indicates the availability of a skilled workforce demanded by today's employers.

In 2019, 41.0% of state residents 25 or older had at least an associate degree. That percentage was less than 37% in 2013. This population was concentrated in urban counties and counties with two- or four-year universities.

In four less-populous counties, residents with at least an associate degree accounted for under 25% of the population.

Commuting

Commuting in or out of a county can be the result of many factors. Workers typically seek high-paying jobs. Many also choose to live in locations with particular amenities, e.g., good schools, affordable housing, and parks and recreation. The place with good jobs may be in a different county than the one with amenities, which results in commuting.

Here, net commuting is measured as the number of commuters into a county minus the number commuting out as a percentage of the total county workforce. A positive figure indicates the county attracts more workers than the number leaving.

Counties provide a vast number of local services, from child welfare services, to assisting veterans and the elderly, to maintaining both county and state roads. Understanding where counties spend their dollars and how they pay for public services is an essential part of a county official's job.

According to the most recent state figures available, total spending by county governments averaged just over \$1,000 per capita in 2019. By county, spending ranged from under \$600 to more than \$2,400 per resident. Counties with relatively small populations and significant fixed costs often have higher per capita costs.

The largest share of county expenditures, about a third, paid for health and human service programs delivered to a variety of groups, including children, seniors, veterans, and the mentally ill.

Counties have several sources of revenue to fund the services they provide. Property taxes typically account for about 40% of revenues, although that varies by county. State aid, particularly for human services, accounts for more than a quarter of revenues on average.

In recent decades, the 0.5% optional sales tax has been adopted by most counties in Wisconsin. It typically contributes 10% or less of revenues.

Note: Spending figures are self-reported using Wisconsin Department of Revenue accounts. It should be noted that counties can differ on how spending is categorized. Users should be cautious when comparing spending categories.

Total Spending

County government spending depends on a variety of factors, including poverty, crime, and miles of county and state roads. Spending figures reported here are provided by counties to the Wisconsin Department of Revenue and include both operating and capital expenditures. They are presented here on a per capita basis to adjust for county population differences.

Per capita spending in 2019 averaged \$1,011 per resident statewide and was generally higher in less populous counties.

Highway Expenditures

Counties are responsible for maintaining, repairing, and upgrading county highways. They are also responsible for maintaining any state or interstate highways within their boundaries. In some cases, counties also maintain town roads.

A county's highway expenditures depend on road miles, as well as pavement condition. Since capital spending is included, spending can be volatile due to material and equipment purchases.

Statewide, county highway spending averaged \$91 per capita in 2019. As counties are responsible for state and interstate highways, expenditures listed here will not correlate perfectly with the county road miles reported on page 55.

Health & Human Services

The largest expenditure category for counties is health and human services (HHS), accounting for about one-third of all county spending. According to the Wisconsin Department of Revenue, spending in this area includes “health officers, health inspections, mental health programs, general relief, cemetery, humane shelter, institution care, social programs, aging and veterans programs.” In 2019, HHS spending averaged \$327 per capita statewide.

State Aids

State aids fund about 26% of the cost of county services. The largest share of these aids helps pay for a variety of human service programs. Counties also receive state assistance for health, highways, and law enforcement, as well as county and municipal aids (shared revenues) that can be used for any purpose. Taken together, shared revenues and aids for health and human services accounts for about 80% of the total.

Total state aids to counties averaged \$240 per person across the state in 2019, about the same as five years earlier. Generally, per capita aids were highest in the north and lowest in the southeast.

Property Tax Levy

The property tax is the largest local revenue source for counties. On average, property taxes account for more than 40% of county revenues. In 2020, counties levied more than \$2.2 billion in property taxes, or \$398 per capita.

Since 2005, increases in county property taxes have been tied to net new construction in the county (see page 53). The highest property taxes per capita were found primarily in northern and central Wisconsin. Levies were above \$700 per resident in 11 counties and below \$300 per capita in five counties.

Property Tax Rates

Property tax rates vary widely by county. The tax rate is a ratio of the county levy to the value of all taxable property in the county, excluding the value in tax incremental finance (TIF) districts. Generally, counties with higher tax levies have higher rates, while those with more taxable property value have lower rates. In 2020/21, the highest rates were mostly in central and north central Wisconsin. Statewide, the county property tax rate averaged \$3.97 per \$1,000 of taxable property value.

County Sales Taxes

The state allows counties to impose a half-cent sales tax. In 2020, 68 of 72 counties imposed the tax, with Menominee and Outagamie beginning the tax that year.

Counties that have regional retail centers collect more sales taxes per capita than others. Despite the COVID-19 pandemic, sales tax collections declined in only four counties. Statewide, collections averaged \$81 per capita in 2020.

County Debt

Counties typically borrow to pay for long-term capital projects, such as major highway construction, new or expanded jails, or other buildings. Typically, the debt is repaid over 20 years. The primary type of borrowing by counties is general obligation debt that is backed by the credit and taxing authority of the county.

On average in 2019, counties owed \$447 per capita in general obligation debt, up from \$401 in 2014. Three counties were debt free in 2019.

---------	-------	--------	-------

A county's finances, and to some degree its demography, are related to its economic health. Income, poverty, unemployment, and property values help determine a county's ability to prosper and to provide public services. These factors can also point to the need for services, whether it be income maintenance, health care, job assistance, or redevelopment.

Like some of the other measures in this book, these economic factors are often related. High per capita incomes likely mean less poverty and joblessness, and a larger property tax base. The reverse is also true: Low incomes are often accompanied by poverty, unemployment, and less property ownership.

The geography of the state reflects these economic factors. Many counties in the southwest, rural center, and north illustrate the combination of modest incomes, above average poverty, and shrinking labor forces.

One way for a county to move from a position of relative disadvantage to one of prosperity is through economic expansion. Employment growth is one indicator. New construction is another measure of economic growth. This is especially important for local governments because new construction determines allowable increases in the property tax levy.

Construction activity has been greatest in counties with easy interstate access – areas that run from Brown County in the northeast, south to the Illinois border, and then northwest through Madison to La Crosse and toward Minneapolis.

Personal Income

Personal income is a broad economic measure that includes total wages, dividends and interest, rental income, and government payments, among others. To compare large and small counties, we report this measure on a per capita basis.

In 2019, Wisconsin's per capita personal income (PCPI) was \$53,227. Per capita income tends to be highest in urban and suburban counties. Average wages and cost of living are generally higher there as well. In four counties, PCPI was above \$60,000; in 18 counties, it was under \$45,000.

Employment Growth

Job growth is important for the economic health of counties. Monthly and annual changes can sometimes be an aberration due to unusual activity. Thus, five-year changes are presented here to smooth those aberrations. However, the pandemic negatively impacted job numbers in 2020. During 2015-20, the number of jobs statewide declined 2.3%, with all of that decline in 2020. Despite the pandemic, 14 counties had positive growth over the five years.

Unemployment

The unemployment rate is another measure of economic health. The rate is calculated as the number of county residents 16 or older who are unemployed and looking for work as a percentage of the total workforce in the county.

In 2020, unemployment spiked due to the pandemic. Statewide, 6.3% of the labor force was unemployed in 2020, up from 3.3% in 2019. Unemployment rates tended to be higher in northern Wisconsin.

Poverty

Reducing poverty can limit demand for tax-funded public services. The federal government set the 2019 poverty level for a family of four at \$25,750. Families with incomes at or below that level are considered in poverty.

In 2019, the statewide poverty rate averaged 10.4%, down from 11.1% in 2018. Generally, poverty was lowest in southeast Wisconsin and highest in the north and southwest.

Note: For 2021, the income cutoff for a family of four is \$26,500

Property Values

Equalized values are state estimates of the current market value of all taxable property in a county. Per capita values tend to be higher in counties with more businesses and in those with more vacation property owned by non-residents. Statewide, values averaged \$104,727 per capita in 2020, a 5.4% increase from 2019.

Of the 10 counties with the highest equalized value per capita, eight are in the north. These are generally sparsely-populated counties with large amounts of vacation property, most of it owned by nonresidents.

New Construction

Net new construction measures the value of new taxable buildings in an area. This measure serves a dual purpose. First, it provides a measure of economic activity in a county. Second, the percentages are used in the state levy limit formula to determine the amount by which counties can increase their property tax levies. Net new construction for 2020 (activity during 2019) averaged 1.6% statewide.

Generally, new construction was greatest in counties with interstate access – from Brown County south to Kenosha County, and from Rock County running northwest to La Crosse and St. Croix counties. New construction activity was weakest in the northern third of the state.

County Highway Miles

Wisconsin has nearly 40,000 miles of county highways that county governments must maintain. By comparison, total state and interstate highway miles total less than 12,000.

Among many factors accounting for the number of highway miles, geography is among the most important – large counties generally have more county highway miles than small ones.

Caution: Since county highway spending includes expenditures for maintenance of state and interstate highways within the county, it should not be combined with the figures here to calculate spending per mile.

POPULATION APPENDIX

To provide comparative figures for the state's diverse 72 counties, much of the data contained in this report is presented on a per capita basis. However, there are times when users may prefer totals rather than per capita figures. To facilitate that, the appendix that follows provides two years of population figures: 2019 and 2020.
